NOTHING LESS THAN THE DIGNITY OF MAN: THE EIGHTH AMENDMENT AND STATE EFFORTS TO REINSTITUTE TRADITIONAL METHODS OF EXECUTION

James C. Feldman

Abstract: While lethal injection is the predominant method of executing death row inmates in America, European export bans and pharmaceutical manufacturers’ refusal to supply execution drugs has impeded the ability of states’ departments of corrections to obtain the drugs used for lethal injections. Facing a drug shortage, several death penalty states have considered legislation to reinstate the use of electric chairs, firing squads, and gas chambers. Efforts to restore traditional methods of capital punishment raise questions about whether such methods still comply with the Eighth Amendment’s prohibition against cruel and unusual punishments. The Supreme Court has observed that the Eighth Amendment is not static, but draws its meaning from society’s “evolving standards of decency.” To assess these evolving standards, the Court previously has looked to state laws to determine if a national consensus exists with respect to who is eligible for capital punishment and by what means states carry out death sentences. States have moved away from traditional methods of capital punishment. This trend suggests the traditional methods of capital punishment have fallen out of favor and can no longer withstand Eighth Amendment scrutiny.

INTRODUCTION

If some states and the federal government wish to continue carrying out the death penalty, they must turn away from this misguided path [lethal injection] and return to more primitive—and foolproof—methods of execution . . . [I]f we are willing to carry out executions, we should not shield ourselves from the reality that we are shedding human blood. 1

– Judge Alex Kozinski, United States Court of Appeals for the Ninth Circuit

Since the United States Supreme Court lifted the moratorium on capital punishment in 1976,2 lethal injection has been the predominant method of executing death row inmates in the United States.3 In recent

1. Wood v. Ryan, 759 F.3d 1076, 1103 (9th Cir. 2014) (Kozinski, C.J., dissenting from denial of rehearing en banc).
years, an export ban by the European Union has made it increasingly difficult for United States prisons to procure the drugs typically used in lethal injections. The unavailability of lethal injection drugs has led some states to consider legislative proposals to reinstitute traditional methods of execution, including electrocution, firing squad, and lethal gas.

The efforts of these states to reinstitute traditional methods of capital punishment raise the question of whether older methods of execution still comply with the Eighth Amendment’s prohibition on cruel and unusual punishments. The Supreme Court has not considered the constitutionality of certain traditional methods of capital punishment in well over a hundred years. Given the progress in science, medicine, and contemporary notions of morality and punishment, can execution methods once deemed acceptable still pass constitutional muster?

This Comment argues that Supreme Court jurisprudence, particularly with respect to the Eighth Amendment’s “evolving standards of decency,” can be used to analyze the constitutionality of the traditional methods of capital punishment. The Court has previously looked to the laws of the states to determine if a consensus exists as to which offenders are eligible for capital punishment. Looking again to the laws of the states, this Comment argues that the states’ shift away from the use of electric chairs, gallows, gas chambers, and firing squads represents a broadening consensus against traditional methods of execution. This broadening consensus suggests that traditional methods of execution now violate the Eighth Amendment’s prohibition on cruel and unusual punishments.

7. See H.R. 1879, 55th Leg., 1st Sess. (Okla. 2015).

8. U.S. CONST. amend. VIII.

Part I of this Comment examines the historical background and evolution of capital punishment in the United States. Part II surveys the common methods used to execute capital offenders prior to lethal injection. Part III considers the lethal injection drug shortages, which have led to proposals to reinstate traditional methods of capital punishment in several states. Part IV analyzes the constitutionality of traditional methods of execution against the framework of the Supreme Court’s Eighth Amendment jurisprudence. Part V argues that states’ efforts to revert to traditional methods of capital punishment do not meet the “evolving standards of decency” used by the Court to analyze Eighth Amendment issues.

I. THE EVOLUTION OF CAPITAL PUNISHMENT IN AMERICA

A. Capital Punishment in the Colonies

The English colonists brought capital punishment with them when they immigrated to America. In the pre-incarceration era of colonial America, capital punishment was the “equivalent of prison today—the standard punishment for a wide range of serious crimes.” American capital punishment drew from England’s “Bloody Code,” with colonies imposing capital punishment for a number of crimes, including murder, rape, manslaughter, robbery, burglary, theft, counterfeiting, and arson. Some colonies also enforced capital punishment for crimes like blasphemy, idolatry, adultery, witchcraft, and sodomy. Capital punishment was widely accepted in the colonies, not only for its deterrent and retributive effects, but also for its perceived ability to facilitate repentance in criminals.

In the late eighteenth century some “criminals were occasionally pressed to death, drawn and quartered, and burned at the stake.” Hanging, however, was the most widely accepted method of executing

13. Id. at 23.
15. See BANNER, supra note 12, at 5.
16. Id. at 5–8.
17. See id. at 16.
criminals at America’s founding, and remained the predominant method of execution through the end of the nineteenth century.

Capital punishment in America has changed dramatically since colonial times. In the late eighteenth century, prison emerged as a means of punishment for those convicted of crimes. While states incarcerated criminals for less serious crimes, states still frequently imposed death sentences. As America’s system of criminal justice evolved, so did the methods of carrying out capital punishment.

B. The Eighth Amendment’s Prohibition on Cruel and Unusual Punishments

The Eighth Amendment of the United States Constitution provides: “Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.” The United States Supreme Court occasionally has considered whether the existence of the death penalty or the methods by which it is carried out violate this amendment. Although the Court has placed some substantive limits on who is eligible for the death penalty, except for a brief period in the 1970s, the Court has permitted executions to continue despite the trend away from capital punishment in other western democracies.

27. See infra Part I.C.

28. LARRY W. KOCH, COLIN WARK & JOHN F. GALLIHER, THE DEATH OF THE AMERICAN DEATH PENALTY: STATES STILL LEADING THE WAY, at ix (2012). While the international trend away from the death penalty has led many legal scholars to question the reasons capital punishment persists in America, see id., this Comment will focus on the interplay between the methods of capital punishment and the Eighth Amendment.
The Supreme Court has identified retribution and deterrence as the primary social purposes of the death penalty. The Court has declined to hold that the death penalty is a per se violation of the Eighth Amendment, noting “the punishment of death is not cruel within the meaning of that word as used in the Constitution. It implies there something inhuman and barbarous,—something more than the mere extinguishment of life.” Over time, the Court has reiterated this view, noting “[w]hatever the arguments may be against capital punishment . . . the death penalty has been employed throughout our history, and, in a day when it is still widely accepted, it cannot be said to violate the constitutional concept of cruelty.” Despite capital punishment’s acceptance, the Court on occasion has revisited the propriety of the death penalty.

C. \textit{Furman v. Georgia: A Short-Lived Moratorium on Capital Punishment}

Concern over racial disparity in the imposition of death sentences led to a brief moratorium on executions in America. In 1971, at the urging of the National Association for the Advancement of Colored People, the Court agreed to hear the consolidated appeals of William Furman, Lucious Jackson, and Elmer Branch in \textit{Furman v. Georgia}. All three were African American men on death row. A jury convicted Furman of killing a white homeowner during a burglary, while Jackson and Branch were convicted separately of raping white women. By a five-to-four vote, the Court issued a six-sentence decision, holding, “the imposition and carrying out of the death penalty in these cases constitute[s] cruel and unusual punishment in violation of the Eighth and Fourteenth Amendments.” Each Supreme Court Justice issued a separate opinion.

articulating his reasoning. Several justices expressed concern over the seemingly discriminatory and arbitrary nature by which states imposed death sentences. The decision effectively vacated all death sentences pending in the United States at the time the Court decided Furman and replaced them with life imprisonment. While death penalty opponents heralded Furman as a major achievement, the moratorium on capital punishment was short lived.

D. Gregg v. Georgia: Reinstating Capital Punishment

The public was quick to condemn the Furman decision and the Court soon ended the moratorium on capital punishment when it decided Gregg v. Georgia. The petitioner in Gregg was a hitchhiker convicted of robbing and murdering the two men who gave him a ride. Gregg was sentenced to death under Georgia’s revised death penalty statute, which was designed to address the constitutional concerns expressed by the Court in Furman. Georgia’s revised capital punishment statute enumerated certain aggravating circumstances, one of which must be present before a death sentence could be imposed. The new law also authorized the jury to consider mitigating circumstances and provided for an automatic appeal of all death sentences to the Georgia Supreme Court. Most importantly, Georgia implemented a bifurcated trial proceeding. In the first phase of the trial, the jury determines the guilt or innocence of the defendant. If the jury finds the defendant guilty, a second phase commences for the judge or jury to consider aggravating

40. Banner, supra note 12, at 158–60.
41. See id. at 196 (“In the wake of Furman, Georgia amended its capital punishment statute . . . .”); Bessler, supra note 3, at 5.
42. Gregg, 428 U.S. at 196–97.
43. Id. at 197–98.
44. Id. at 197 (“These procedures require the jury to consider the circumstances of the crime and the criminal before it recommends sentence. No longer can a Georgia jury do as Furman’s jury did: reach a finding of the defendant’s guilt and then, without guidance or direction, decide whether he should live or die.”).
and mitigating factors to determine whether to impose a sentence of death or a lesser level of punishment. The Court reasoned:

When a human life is at stake and when the jury must have information prejudicial to the question of guilt but relevant to the question of penalty in order to impose a rational sentence, a bifurcated system is more likely to ensure elimination of the constitutional deficiencies identified in Furman. Georgia’s revised sentencing procedures led the majority to “hold that the statutory system under which Gregg was sentenced to death does not violate the Constitution.”

All told, thirty-eight states enacted new death penalty statutes meeting the constitutionally acceptable guidelines outlined by the Court in Gregg by the end of the 1980s. Under Gregg’s new standard, a death sentence is not cruel and unusual punishment if administered in a manner that was not arbitrary, capricious, or discriminatory. After a four-year hiatus, the modern era of capital punishment began anew.

E. Eighth Amendment and Capital Punishment After Gregg

States have executed over 1400 inmates since the Court’s decision in Gregg. The Supreme Court has acknowledged that the Eighth Amendment’s prohibition on cruel and unusual punishment “draw[s] its meaning from the evolving standards of decency that mark the progress of a maturing society.” Applying this principle to limit which crimes and offenders may be subject to the death penalty, the Court concluded the death penalty constitutes cruel and unusual punishment for the crime of rape, as well as when it is applied to juvenile offenders and the intellectually disabled. The Court has not gone so far as to declare the death penalty a per se violation of the Eighth Amendment and has

repeatedly upheld the death penalty against constitutional challenges.\textsuperscript{56}

II. TRADITIONAL METHODS OF CAPITAL PUNISHMENT

In American colonial times, “criminals were occasionally pressed to death, drawn and quartered, and burned at the stake.”\textsuperscript{57} But with the passage of the Eighth Amendment as part of the Bill of Rights, such methods were no longer acceptable.\textsuperscript{58} In considering the Eighth Amendment as applied to execution by firing squad, the Court observed that while difficult to define the exact bounds of cruel and unusual punishments, “it is safe to affirm that punishments of torture . . . and all others in the same line of unnecessary cruelty, are forbidden by that amendment to the Constitution.”\textsuperscript{59}

Toward the end of the nineteenth century, the Court condemned certain antiquated methods of execution as cruel and unusual punishment.\textsuperscript{60} Specifically, in dicta the Court indicated executing criminals by “burning at the stake, crucifixion, breaking on the wheel, or the like” would violate the Eighth Amendment’s prohibition on cruel and unusual punishment.\textsuperscript{61} Nevertheless, even recently, the Court has reiterated its endorsement of capital punishment as an appropriate penalty and has largely declined to put restrictions on the methods of carrying out death sentences.\textsuperscript{62}

Methods of execution historically have evolved with efforts to make capital punishment more “humane.”\textsuperscript{63} States developed new procedures...
and apparatuses with the goal of affecting quicker, less painful deaths on condemned inmates. This Comment will now consider the “traditional methods” of execution used to carry out death sentences in America prior to the adoption of lethal injection as the predominant method of executing capital offenders.

A. Hanging

In the mid-1800s, hanging was the predominant method of execution in the United States.\(^{64}\) Hangings were public events, often drawing thousands of spectators,\(^{65}\) but over the course of the nineteenth century state legislatures enacted laws to mandate private executions.\(^{66}\) Hangings, subsequently, were conducted at prison gallows.\(^{67}\) Presently, hanging is a permitted method of execution in Delaware,\(^{68}\) New Hampshire,\(^{69}\) and Washington State,\(^{70}\) but lethal injection is the primary method of execution in all three of these states.\(^{71}\) Only three prisoners have been executed by hanging since the reinstatement of the death penalty by the Supreme Court’s decision in \textit{Gregg} in 1976.\(^{72}\) The last inmate executed by hanging was Bill Bailey in Delaware in 1996.\(^{73}\) In 1994, an inmate challenged Washington State’s method of hanging as violating the Eighth Amendment.\(^{74}\) The federal district court held that

hanging was not a per se violation of the Eighth Amendment, but was unconstitutional as applied to inmate Mitchell Rupe, whose morbid obesity posed a high risk of decapitation.  

B. Firing Squad

Although less frequently implemented as a method of execution, states have occasionally used firing squads to carry out death sentences. In Wilkerson v. Utah, the Supreme Court considered the constitutionality of execution by firing squad. The Court held that while the Eighth Amendment forbids cruel and unusual punishments, “the authorities referred to are quite sufficient to show that the punishment of shooting as a mode of executing the death penalty for the crime of murder in the first degree is not included in that category.”

Oklahoma and Utah currently authorize the firing squad, but lethal injection remains the primary method of execution in both states. The firing squad is authorized in Utah only for inmates who chose this method prior to May 3, 2004, or in the event that lethal injection is held unconstitutional, or if the State is unable to procure lethal injection drugs. Oklahoma permits the use of a firing squad only if lethal injection or electrocution is held unconstitutional.

Gary Gilmore was the first person executed in the United States after the Court’s decision in Gregg reinstated the death penalty. Gilmore, who opposed attempts to appeal his murder conviction and death sentence, demanded Utah execute him by a firing squad. To carry out a death sentence by firing squad, the condemned inmate is strapped to a chair in front of a sandbag-lined wall. A cloth target is fastened to the

front of the prisoner’s jumpsuit to mark the heart. Several marksmen positioned twenty feet away simultaneously fire at the prisoner’s heart. Ronnie Lee Gardner was the most recent inmate executed by firing squad in Utah in 2010.

C. Electrocution

In the late 1800s, states began to replace their gallows with electric chairs on the theory that execution by electrocution was more humane. William Kemmler was the first person put to death in the electric chair in 1890 after the Supreme Court rejected his challenge that New York’s new method of execution amounted to cruel and unusual punishment. In upholding the validity of New York’s electrocution statute, the Court found:

[B]ut little in it to warrant the belief that this new mode of execution is cruel, within the meaning of the [C]onstitution . . . . On the contrary, we agree with the court below that it removes every reasonable doubt that the application of electricity to the vital parts of the human body, under such conditions and in the manner contemplated by the statute, must result in instantaneous, and consequently in painless, death.

To carry out electrocution, the electric chair applies alternating current between 500 and 2000 volts to the condemned prisoner’s head and body for about thirty seconds. This process repeats until the shock from electrocution causes respiratory paralysis and cardiac arrest. Despite numerous accounts of grotesque and botched electrocutions, the electric chair remained the predominant method of execution for

91. Weisberg, supra note 84, at 24.
92. Id.
nearly a century. In 1915, the Court reiterated its “well-grounded belief that electrocution is less painful and more humane than hanging.” By 1949, twenty-six states had replaced hanging with electrocution. One hundred and fifty eight prisoners have been electrocuted since the Court’s decision in Gregg. In 1993, Justices Souter, Blackmun, and Stevens questioned the constitutionality of electrocution and noted the Court had failed to revisit the issue since its decision in Kemmler over a hundred years earlier.

Eight states currently authorize the use of the electric chair as a backup method to lethal injection. In 2008, the Nebraska State Supreme Court struck down the State’s use of electrocution, finding “assumptions about an instantaneous and painless death were simply incorrect” and that “electrocution is unnecessarily cruel in its purposeless infliction of physical violence and mutilation of the prisoner’s body.” The Court concluded electrocution “violates the prohibition on cruel and unusual punishment.” Robert Gleason was the most recent inmate electrocuted, when Virginia executed him in 2013.

D. Lethal Gas

The first use of lethal gas to carry out the death penalty was in 1924, after Nevada’s Deputy Attorney General convinced members of Nevada’s State Assembly that “lethal gas would be more humane than hanging or the firing squad.” Under this method of execution, the condemned prisoner is strapped into an airtight chamber where a

chemical reaction is remotely initiated, releasing poisonous hydrogen cyanide into the sealed chamber. After several minutes of exposure to lethal gas, the inmate’s spasms subside and the inmate finally succumbs to the lack of oxygen to the brain. States have put to death eleven prisoners in gas chambers since the death penalty was reinstated in 1977. Only Arizona, California, Missouri, Oklahoma, and Wyoming still authorize lethal gas as a means of administering the death penalty. Wyoming and Missouri, however, do not currently have functioning gas chambers. Walter LaGrand was the last prisoner executed by lethal gas in Arizona in 1999.

Two death row inmates challenged the constitutionality of California’s lethal gas procedures in *Fierro v. Gomez.* After an eight-day bench trial, the District Court held:

California’s method of execution by administration of lethal gas strongly suggests that the pain experienced by those executed is unconstitutionally cruel and unusual. This evidence, when coupled with the overwhelming evidence of societal rejection of this method of execution, is sufficient to render California’s method of execution by lethal gas unconstitutional under the Eighth Amendment.

The Ninth Circuit Court of Appeals affirmed, but the Supreme Court later vacated the finding of unconstitutionality after the California legislature modified the State’s death penalty statute to give death row

inmates the choice between the gas chamber and lethal injection.\textsuperscript{112} On remand, the Ninth Circuit determined the inmates lacked standing to challenge California’s use of the gas chamber because neither had opted to die by lethal gas.\textsuperscript{113}

\textbf{E. Lethal Injection Becomes the Method of Capital Punishment in the United States}

In an effort to find a less painful means of executing prisoners, death penalty states have “altered [their] method[s] of execution over time to more humane means of carrying out the sentence. That progress has led to the use of lethal injection by every jurisdiction that imposes the death penalty.”\textsuperscript{114} While lethal injection may be perceived as a more humane method of imposing death sentences, the transition to lethal injection was also an economic decision.\textsuperscript{115} Oklahoma was the first state to adopt lethal injection in 1977, in part because the State was reluctant to spend money on repairing the Department of Corrections’ electric chair.\textsuperscript{116} The legislatures in Texas, Idaho, and New Mexico quickly followed suit,\textsuperscript{117} and Texas was the first state to carry out an execution by lethal injection when it executed Charles Brooks, Jr. in 1982.\textsuperscript{118} Lethal injection is currently the sole or primary means of execution in all states that have the death penalty.\textsuperscript{119}

To administer lethal injection, prison officials strap the condemned inmate to a table or hospital gurney and attach an intravenous drip to the inmate’s arm.\textsuperscript{120} Lethal injection usually involves the use of a three-drug cocktail.\textsuperscript{121} The first drug, typically sodium thiopental or pentobarbital,

  \item \textsuperscript{121} See Seema K. Shah, Experimental Execution, 90 WASH. L. REV. 147, 170–71 (2015) (summarizing the adoption of modern lethal injection protocols). The cocktail of drugs used in lethal injection has varied in recent years as state departments of corrections have been unable to secure supplies of drugs traditionally used for lethal injections. See infra Part III.A.
\end{itemize}
is an anesthetic meant to put the inmate to sleep. The second drug, typically pancuronium bromide, is a muscle relaxant used to paralyze the inmate. Finally, a lethal dose of potassium chloride is administered to stop the inmate’s heart. “The proper administration of the first drug ensures that the prisoner does not experience any pain associated with the paralysis and cardiac arrest caused by the second and third drugs.”

Proponents of lethal injection argue the method is much less violent than the electric chair and amounts to “a quick, merciful snuffing out” of the condemned inmate’s life.

Despite its popularity as a more “humane” method of execution, lethal injection has met stiff opposition in the medical community. Medical professionals have been highly critical of the use of lifesaving drugs to inflict death. In 1980, the American Medical Association adopted a resolution discouraging physicians from participating in lethal injections, contending such assistance violates a doctor’s Hippocratic Oath. Because medical ethics generally preclude physicians from participating in executions, there is a danger that poorly trained technicians will fail to locate a working vein, complicating the procedure and in some cases resulting in conscious inmates complaining of intense pain during lethal injection.

It was on these very grounds that the Court in 2008 considered an Eighth Amendment challenge to Kentucky’s lethal injection protocol in Baze v. Rees. The inmates in Baze argued the improper administration of the lethal injection drugs, particularly of sodium thiopental, might result in an excruciatingly painful execution amounting to cruel and unusual punishment. In a plurality opinion, Chief Justice Roberts upheld Kentucky’s lethal injection protocol, holding the inmates had “not carried their burden of showing that the risk of pain from

maladministration of a concededly humane lethal injection protocol, and the failure to adopt untried and untested alternatives, constitute cruel and unusual punishment. The Court again declined to put limits on the methods used to put inmates to death.

The Court most recently revisited lethal injection in *Glossip v. Gross*, when it considered a challenge to Oklahoma’s use of a sedative, midazolam, as the first drug in a three-drug lethal injection cocktail. The inmates argued midazolam was not designed to affect or maintain unconsciousness and is incapable of masking the intense pain caused by the second and third drugs administered during lethal injection. A five-to-four majority of the Supreme Court was unconvinced, and on June 29, 2015, the Court upheld Oklahoma’s new three-drug lethal injection protocol. The majority held that the inmates failed to establish that the risk of harm was substantial compared to known alternative methods of execution, and that the district court did not commit clear error in finding midazolam was likely to render the condemned inmates insensate to pain.

III. UNAVAILABILITY OF LEthal INJECTION DRUGS SPURS STATES’ EFFORTS TO REINSTITUTE TRADITIONAL METHODS OF EXECUTION

A. *Unavailability of Lethal Injection Drugs and Questions About New Lethal Injection Procedures Hinder States’ Efforts to Execute Capital Offenders*

Although the Court upheld the constitutionality of lethal injection in *Baze* and *Glossip*, European Union opposition to using medications for lethal injection has complicated the administration of capital punishment in America. The United States has come under intense international pressure to end capital punishment. The European Union strongly

139. *Id.* at 2729.
140. See Ford, supra note 4.
141. See CLARKE & WHITT, supra note 109, at 2 (“Most of the world has repudiated the death penalty . . . . Considerable international pressure—particularly in matters of extradition and consular relations—is being brought to bear on the United States to abolish state execution, and this pressure
opposes the death penalty and its “abolition is also a precondition for candidate countries seeking accession to the EU.” European aversion to capital punishment has “grown so strong that Britain and Germany banned the shipment of sodium thiopental to the United States.” The manufacturers of the anesthetizing drugs propofol and phenobarbital have similarly taken measures to keep their drugs from reaching states’ departments of corrections for use in executions.

Efforts to obtain the drugs subject to the European Union’s export ban from domestic manufacturers have also faltered. In January 2011, the sole manufacturer of sodium thiopental in the United States announced that it would no longer make the drug due to concerns of product diversion for use in capital punishment. In the medical field, sodium thiopental has largely been replaced by newer anesthetics, meaning there is a limited market for the drug in United States hospitals. Additionally, sodium thiopental only has a four-year shelf life, making it difficult for United States prisons to stockpile supplies. States unable to obtain supplies of drugs traditionally used to administer lethal injection have turned to lightly regulated compounding pharmacies to obtain lethal injection drugs, but the methods of securing the drugs and the identities of the providers have been the subject of extensive litigation, bringing capital punishment to a halt in several states. Death sentences have been delayed as states attempt to develop new lethal injection procedures with substitute drugs.

is mounting steadily.”).

143. See KOCH ET AL., supra note 28, at ix.
146. Ford, supra note 4.
147. Id.
Efforts to find substitute lethal injection drugs have posed new challenges for death penalty states. After several botched lethal injections using the sedative midazolam in place of sodium thiopental and pentobarbital, several death row inmates challenged Oklahoma’s new lethal injection procedures. The Court narrowly upheld Oklahoma’s lethal injection protocol, providing a pathway for states to continue lethal injections using midazolam. Yet, pharmaceutical companies are already taking steps to inhibit states from using midazolam for executions. Akorn Pharmaceuticals, an American manufacturer of midazolam, has publicly stated its strong opposition to the use of its products in executions, and has taken steps to prevent sales of the drug to prison systems. It remains to be seen if the pharmaceutical industry will similarly be able to restrict the supply of midazolam to United States prisons, as was the case with sodium thiopental and pentobarbital.

B. State Efforts to Reinstitute Traditional Methods of Capital Punishment

The inability to procure the drugs necessary to carry out lethal injections and uncertainty regarding the constitutionality of new lethal injection procedures have created a perplexing situation. Thousands of inmates are currently on death row in America; however, many states have no supply of the drugs needed to carry out lethal injections. As if

151. See, e.g., Alan Johnson, Capital Punishment – Expert: Inmate’s Execution Inhumane, COLUMBUS DISPATCH, Aug. 13, 2014, at 1B (reporting inmate Dennis McGuire “gasped, choked, clenched his fists and appeared to struggle against his restraints for about 10 minutes after the administration of” midazolam and hydromorphone, before dying twenty-six minutes later); Erik Eckholm, One Execution Botched, Oklahoma Delays the Next, N.Y. TIMES, Apr. 30, 2014, at A1 (reporting inmate Clayton Lockett regained consciousness after the administration of midazolam and was speaking and writhing in intense pain for over ten minutes before finally dying forty-three minutes after the execution began).

156. SNELL, supra note 71, at 1.

157. See generally Ford, supra note 4 (discussing state efforts to find new supplies of lethal
channeling Judge Kozinski’s dissent in Wood v. Ryan, the situation has led to proposals in several states to return to traditional methods of capital punishment. This Comment examines the various state legislative proposals to reinstate electrocution, the firing squad, and lethal gas as a means of administering death sentences. Since 2014, seven states (Alabama, Missouri, Oklahoma, Tennessee, Utah, Virginia, and Wyoming) have considered legislative proposals to reinstitute traditional methods of execution, and three states (Oklahoma, Tennessee, and Utah) have enacted laws reauthorizing the use of lethal gas, the electric chair, and the firing squad. A summary of these legislative proposals and the three enacted laws follows.

1. Alabama Considers the Electric Chair

On January 27, 2015, Alabama State Senator Cam Ward pre-filed legislation to reinstate electrocution as an authorized method of carrying out death sentences. Alabama previously used the electric chair as the State’s primary method of execution until it switched to lethal injection in 2002. The proposal would permit the use of the electric chair to execute inmates if a court holds the State’s lethal injection procedures are unconstitutional or if the State is unable to procure lethal injection drugs. The companion bill passed the Alabama House of Representatives on March 11, 2015, but language reinstating the electric chair was subsequently dropped by the Senate Judiciary Committee in favor of a provision designed to keep the source of lethal injection drugs confidential.

injection drugs).

158. 759 F.3d 1076, 1102–03 (9th Cir. 2014) (Kozinski, C.J., dissenting from denial of rehearing en banc) (“If some states and the federal government wish to continue carrying out the death penalty, they must turn away from this misguided path [lethal injection] and return to more primitive—and foolproof—methods of execution.”), vacated, 135 S. Ct. 21 (2014).

159. See infra Part III.B.

160. See infra Part III.B.

Missouri similarly has been unable to obtain the drugs necessary to carry out lethal injections. Missouri law still authorizes the use of lethal gas, but the State has not executed an inmate with lethal gas since the 1960s, and does not currently have a functioning gas chamber.

Missouri is considering two proposals to address the unavailability of lethal injection drugs. In both 2014 and 2015, State Representative Rick Brattin introduced bills to authorize the use of the firing squad to administer death sentences. Upon introduction, Brattin argued the firing squad is “no less humane than lethal injection.” The legislation, however, did not receive a hearing in 2014, or in 2015.

In 2014, Missouri Attorney General Chris Koster expressed his “belief [that] the legislature should remove market-driven [drug manufacturers’] . . . pressures from the system . . . [and] appropriate funds to establish a state-operated, DEA-licensed, laboratory to produce the execution chemicals in our state.” Koster argued, “Missouri should not be reliant on merchants whose identities must be shielded from public view or who can exercise unacceptable leverage over this

166. Sanburn, supra note 149 ("Like most states with the death penalty, Missouri is struggling to obtain execution drugs.").
167. MO. ANN. STAT. § 546.720(1) (West, Westlaw through 2015 Veto Sess.) ("The manner of inflicting the punishment of death shall be by the administration of lethal gas or by means of the administration of lethal injection.").
168. See O’SHEA, supra note 72, at 216.
171. Kevin Murphy, Firing Squad’s Use Is Urged, COLUMBUS DISPATCH (Jan. 18, 2014), http://www.dispatch.com/content/stories/national_world/2014/01/18/firing-squads-use-is-urged.html.
profound state act.” The Missouri Legislature has yet to act on Attorney General Koster’s proposal.

3. **Oklahoma Authorizes Use of Nitrogen Hypoxia for Executions**

Two Oklahoma legislators proposed legislation to allow for executions by nitrogen hypoxia if a court holds lethal injection unconstitutional or if lethal injection drugs are unavailable. The proposal would use nitrogen instead of the hydrogen cyanide typically used in gas chamber executions. Nitrogen hypoxia causes asphyxiation by depriving the body of oxygen. According to the bill’s sponsor, Senator Anthony Sykes, “[t]he death penalty is a just and appropriate punishment for our worst criminals and nitrogen hypoxia is recognized as one of the most humane methods for carrying out the sentence.” On March 3, 2015, the Oklahoma House passed the legislation by a vote of 85-10. The Senate subsequently passed the legislation by a vote of 41-0 on April 9, 2015, and Governor Mary Fallin signed it into law.

4. **Tennessee Brings Back the Electric Chair**

In 2014, the Tennessee Legislature passed a law reinstating electrocution as an authorized means of carrying out death sentences with overwhelming support. The legislation was intended “to address
“delays” in carrying out death sentences “due to a shortage of lethal injection drugs.” The Tennessee General Assembly feared that if the state were required to disclose its supplier of lethal injection drugs, the shortage might be exacerbated. Previously, Tennessee could only electrocute inmates who committed their crimes before December 31, 1998. The new law allows the Tennessee Department of Corrections to electrocute condemned inmates if (1) “[l]ethal injection is held to be unconstitutional;” or (2) if “the Commissioner of Corrections certifies to the Governor that one or more of the ingredients essential to carrying out a sentence of death by lethal injection is unavailable through no fault of the [Tennessee] Department [of Corrections].”

5. **Utah Legislature Reinstitutes the Firing Squad**

In March 2015, the Utah Legislature passed legislation to reinstate the use of firing squads for executions. The legislation makes firing squads the default method of execution in Utah if the State is unable to obtain lethal injection drugs thirty days prior to an execution. The bill’s sponsor, Representative Paul Ray, characterized the legislation as necessary to avoid “drawn out legal battle[s]” regarding substitute lethal injection drugs and procedures. Representative Ray argued, “[s]ince we’ve already done firing squads . . . it just makes sense that that’s our backup plan to keep the firing squad if we can’t get the drug cocktail.” The bill advanced out of the House Law Enforcement and Criminal Justice Standing Committee and the full House of Representatives in
Utah subsequently passed the bill. On March 10, 2015, the Utah Senate passed the legislation, and on March 23, 2015, Utah Governor Gary Herbert signed the bill into law. Governor Herbert indicated in a press release that lethal injection is still the preferred method of capital punishment, but that this legislation would expand the State’s options if it cannot legally obtain the necessary drugs.

6. Virginia Considers Reinstating the Electric Chair

The Virginia Legislature contemplated legislation to reinstate electrocution in 2014. Virginia’s House of Delegates passed a bill authorizing electrocution as the means of execution if the Director of the Virginia Department of Corrections certifies that lethal injection is not available for any reason. The legislation narrowly failed to garner enough support in the Virginia Senate and was reassigned to a legislative committee for further study.

7. Wyoming: A Solution Without a Problem

Wyoming does not currently have any inmates on death row. The state has executed only one person since the Supreme Court decided

---

Despite Wyoming’s infrequent use of capital punishment, its legislature is considering authorizing the use of firing squads as a backup method of executing death row inmates should the State be unable to secure lethal injection drugs. On January 16, 2015, the Wyoming Senate passed a bill authorizing the use of a firing squad should lethal injection be held unconstitutional “or if the sentencing court finds execution by lethal injection cannot be performed within the time prescribed by law” due to a shortage of lethal injection drugs. One of the bill’s proponents, Senator Bruce Burns, stated, “[i]f we are going to continue to have the death penalty, then we are going to have to have an available secondary form of execution.” The head of Wyoming’s Department of Corrections testified to a legislative committee that Wyoming has no lethal injection drugs on hand and that he supports the use of a firing squad in part because it is “less expensive than constructing a gas chamber or an electric chair.” Wyoming Governor Matt Mead indicated he would sign the bill into law if it also passes Wyoming’s House of Representatives. On February 12, 2015, the Wyoming House narrowly passed the bill after amending the language to require that an anesthetic be used to render the inmate unconscious before he is shot, but the bill ultimately failed in conference between the two legislative chambers.

IV. EIGHTH AMENDMENT JURISPRUDENCE AS A FRAMEWORK FOR EVALUATING THE TRADITIONAL METHODS OF CAPITAL PUNISHMENT

The Supreme Court previously has looked to state laws and public opinion to assess whether a national consensus exists with respect to whom should be eligible for capital punishment. This Comment argues that the majority of states’ rejection of the traditional methods of execution, as well as declining public support for capital punishment in general, suggest that the traditional methods of capital punishment once considered acceptable by the Court can no longer withstand Eighth Amendment scrutiny in contemporary society. Under the “evolving standards of decency” framework for evaluating punishments, traditional methods of capital punishment likely violate the Eighth Amendment’s prohibition on cruel and unusual punishment.

A. The Eighth Amendment and “Evolving Standards of Decency”

In his majority opinion in Baze, Chief Justice Roberts observed that, “[t]his Court has never invalidated a State’s chosen procedure for carrying out a sentence of death as the infliction of cruel and unusual punishment.” Yet, the Supreme Court has repeatedly reaffirmed dicta from Trop v. Dulles that observed that the Eighth Amendment’s prohibition on cruel and unusual punishment “draw[s] its meaning from the evolving standards of decency that mark the progress of a maturing society.” In Trop, as with earlier cases, the Court recognized that the scope of the Eighth Amendment is not static. “A claim that punishment is excessive is judged not by the standards that prevailed in 1685 when Lord Jeffreys presided over the ‘Bloody Assizes’ or when the Bill of Rights was adopted, but rather by those that currently prevail.” The decisions upholding the constitutionality of execution by

213. Trop, 356 U.S. at 100–01 (quoting Weems v. United States, 217 U.S. 349, 378 (1910) (noting the Eighth Amendment, “in the opinion of the learned commentators, may be therefore progressive, and is not fastened to the obsolete, but may acquire meaning as public opinion becomes enlightened by a humane justice”)).
214. Atkins, 536 U.S. at 311.
firing squad and electric chair cited by Chief Justice Roberts are over a century old.\textsuperscript{215} In her dissent in \textit{Baze}, Justice Ginsburg concluded that “[w]hatever little light our prior method-of-execution cases might shed is thus dimmed by the passage of time.”\textsuperscript{216}

The Court has explained that evolving standards of decency “must embrace and express respect for the dignity of the person, and the punishment of criminals must conform to that rule.”\textsuperscript{217} This Comment will next explore whether contemporary notions of the death penalty and cruel and unusual punishment have evolved to a point where society is no longer willing to accept traditional methods of execution.

\textbf{B. The Supreme Court Previously Has Looked to the States as a Means of Determining National Consensus in Capital Cases}

The Court frequently has looked to the laws of the states in an effort to discern the existence of a national consensus with respect to capital punishment. In determining whether a consensus exists, the Court explained:

\begin{quote}
The beginning point is a review of objective indicia of consensus, as expressed in particular by the enactments of legislatures that have addressed the question. These data give us essential instruction. We then must determine, in the exercise of our own independent judgment, whether the death penalty is a disproportionate punishment . . . .\textsuperscript{218}
\end{quote}

With an eye toward determining national consensus, the Court has previously looked to the laws of the states in placing substantive limits on the application of the death penalty. In \textit{Roper}, a majority of the Court determined there is a national consensus against executing juvenile offenders.\textsuperscript{219} In \textit{Atkins v. Virginia},\textsuperscript{220} the Court indicated that the execution of developmentally disabled offenders “has become truly unusual, and it is fair to say that a national consensus has developed against it.”\textsuperscript{221} In \textit{Kennedy v. Louisiana},\textsuperscript{222} the Court found evidence of a

\begin{itemize}
\item 215. \textit{Baze}, 553 U.S. at 115 (Ginsburg, J., dissenting) (“\textit{Wilkerson} was decided 129 years ago, \textit{Kemmler} 118 years ago, and \textit{Resweber} 61 years ago.”).
\item 216. \textit{Id.}
\item 217. \textit{Kennedy}, 554 U.S. at 420.
\item 219. \textit{Id.}
\item 220. 536 U.S. 304 (2002).
\item 221. \textit{Id.} at 315–16 (“It is not so much the number of these States that is significant, but the consistency of the direction of change.”).
\end{itemize}
national consensus against use of the death penalty as punishment for child rape. While the majority of the Court in Baze indicated that there is no national consensus against lethal injection, the modern Court has not specifically considered if a national consensus exists against older methods of capital punishment. Following the methodology used by the Court in previous capital cases, it is useful to review which states currently allow traditional methods of execution to carry out death sentences.

C. Few States Maintain and Use Traditional Methods of Execution

Traditional forms of capital punishment remain legal in some way, shape, or form in fifteen states. Yet, states have used the traditional methods just 175 times since the Supreme Court reinstated the death penalty in Gregg, compared to over 1200 executions by lethal injection during the same period. Additionally, in most circumstances states only permit the use of traditional methods if lethal injection is not available or if a trial court sentenced an inmate to death prior to a state adopting lethal injection as the primary method of execution.

Once the predominant method of executing criminals, states have trended away from hanging based on a commonly held belief that newer methods of execution are “less painful and more humane than hanging.” Executions by hanging are extremely rare in the modern era; only three states authorize hanging and no inmates have been

223. Id. at 426 (“[O]nly six of those jurisdictions authorize the death penalty for rape of a child. Though our review of national consensus is not confined to tallying the number of States with applicable death penalty legislation, it is of significance that, in 45 jurisdictions, petitioner could not be executed for child rape of any kind.”).
224. Baze v. Rees, 553 U.S. 35, 53 (2008) ("[W]e note at the outset that it is difficult to regard a practice [lethal injection] as ‘objectively intolerable’ when it is in fact widely tolerated. Thirty-six States that sanction capital punishment have adopted lethal injection as the preferred method of execution.").
225. SNELL, supra note 71, at 4.
226. Id. at 16; Methods of Execution, supra note 99.
227. See, e.g., UTAH CODE ANN. § 77-18-5.5 (West, Westlaw though 2015 1st Spec. Sess.) (authorizing use of the firing squad if lethal injection is held unconstitutional or if Utah is unable to procure lethal injection drugs); TENN. CODE ANN. § 40-23-114(e) (West, Westlaw through 2015 1st Reg. Sess.) (permitting the use of the electric chair if lethal injection is held unconstitutional or if Tennessee is unable to procure lethal injection drugs).

hanged since 1996.230

Executions by firing squad are similarly rare.231 Only two states authorize firing squads as a backup to lethal injection, and Utah is the only state to actually employ a firing squad in the modern (post-
Gregg) era of capital punishment.232 Despite the frequency with which firearms cause death in the United States,233 they rarely are used to administer death sentences for capital offenders. Even though some noted jurists have argued that firing squads may be quicker and less painful than lethal injection,234 firing squads remain largely a relic of a past era of capital punishment.

In the early 1970s, lethal gas was the second most used method of capital punishment and was the sole method of execution in ten states.235 Currently, only five states authorize the use of lethal gas, three of which do not have functioning gas chambers.236 Of the remaining two states (Arizona and California), execution by lethal gas remains restricted. Lethal gas is only authorized in Arizona for inmates sentenced prior to November 1992.237 California’s gas chamber at San Quentin State Prison has been the subject of so much litigation it has not been used to execute an inmate since 1993.238

After lethal injection, electrocution is the most prevalent method of capital punishment.239 Nevertheless, only one state has reauthorized the electric chair since 1949,240 whereas eighteen states either have enacted legislation to remove electrocution as an option or have seen

245. Mata, 745 N.W.2d at 263.
In addition to the trend away from traditional methods of capital punishment, there is a trend away from capital punishment in general. Since 2007, seven states have abolished the death penalty. During that same period, no state where capital punishment is illegal has adopted or reinstated capital punishment. Currently, thirty-one states and the federal government authorize capital punishment while nineteen states and the District of Columbia have abolished the death penalty. Additionally, governors in three death penalty states have declared moratoria on capital punishment and will not allow any executions during their respective tenures.

248. Neither Wyoming nor Missouri currently has a functioning gas chamber. See supra note 108 and accompanying text.

TIMES, Feb. 12, 2014, at A12 (noting that Washington Governor Jay Inslee declared a moratorium on executions during his tenure); William Yardley, Oregon Governor Says He Will Block Executions, N.Y. TIMES, Nov. 23, 2011, at A14 (noting that Governor John Kitzhaber declared a moratorium on executions in Oregon); Aimee Green, Gov. Kate Brown Extends Ban on Executions but Her Stance on Death Penalty Unclear, THE OREGONIAN (Feb. 20, 2015), http://www.oregonlive.com/politics/index.ssf/2015/02/gov_kate_brown_extends_ban_on.html
The Court previously has looked to public opinion polling to help gauge attitudes towards capital punishment, but also has declined to “rest constitutional law upon such uncertain foundations” as public opinion surveys. In essence, the Court has treated polling as one of several indicia of public sentiment, but alone it is not a dispositive indicator of national consensus on the death penalty. Polling is secondary to other indicia of national consensus such as the number of jurisdictions that permit a particular method of execution and the frequency with which that method is used to execute offenders.

An October 2014 Gallup Poll found that sixty-three percent of Americans support capital punishment for persons convicted of murder. This is consistent with other recent public opinion surveys on capital punishment, which have tracked the steadily diminishing support for the death penalty over the last two decades. A 2014 NBC News Poll indicated that while a majority of Americans still support the death penalty, overall support was much lower for electrocution (eighteen percent of respondents), lethal gas (twenty percent of respondents), hanging (eight percent of respondents), and the firing squad (twelve percent of respondents). Another poll found that while sixty-one
percent of respondents support capital punishment, if lethal injection were outlawed or otherwise unavailable, less than half of the poll’s respondents favored using another method such as the electric chair or gas chamber. While support for particular methods of execution is far less frequently surveyed than is overall support for capital punishment, the limited data available suggests that there is less public support for traditional methods of execution than there is for lethal injection.

V. TRADITIONAL METHODS OF EXECUTION LIKELY VIOLATE THE EIGHTH AMENDMENT’S PROHIBITION ON CRUEL AND UNUSUAL PUNISHMENTS

The Court’s recent decision in Glossip may ultimately delay a reevaluation of the constitutionality of the traditional methods of capital punishment, as the majority’s decision has provided a pathway for states to continue lethal injections using midazolam. But it is also likely that the European Union and pharmaceutical manufacturers will take steps to inhibit midazolam’s use in lethal injections. If states are again unable to secure lethal injection drugs, there may be renewed focus on the traditional methods of capital punishment.

If states persist in reinstituting older methods of capital punishment as a solution to the lethal injection drug shortage, challenges by capital defendants and public pressure may require that the Supreme Court revisit the question of whether the traditional methods withstand constitutional scrutiny. The Court has not evaluated the constitutionality of any one of the traditional methods of capital punishment in almost seventy years. In 2008, a plurality of the Court cited the Kemmler and Wilkerson decisions for the proposition that the Court has never struck down a method of execution as violating the Eighth Amendment, despite the fact that these cases are over a century old. The difference in the present state of medical knowledge as compared to when Kemmler and Wilkerson were decided alone should be sufficient to justify an inquiry

259. See Ergun, supra note 257, at 5.

into the traditional methods of execution. 264 As the Nebraska State Supreme Court observed, many outdated “assumptions about an instantaneous and painless death were simply incorrect.” 265

If the Supreme Court has cause to revisit the traditional methods of execution, the previously articulated Eighth Amendment framework of the “evolving standards of decency that mark the progress of a maturing society” should guide the legal analysis. 266 To determine what these evolving standards of decency are, the Court previously has surveyed state laws for indicia of a consensus with respect to which offenders are eligible for capital punishment. 267 This same approach can be used to determine if a consensus exists with respect to the methods of capital punishment.

In Roper, the Court found evidence of a national consensus against executing juvenile offenders where only twenty states permitted executing juvenile offenders. 268 In Kennedy, the Court determined there was a consensus against executing child rapists where only six states permitted such punishment. 269 In Atkins, the Court found evidence of a consensus against executing offenders with intellectual disabilities where thirty states prohibited the execution of such persons. 270 Conversely, in Baze, the Court held there was no national consensus against lethal injection where at the time thirty-six states authorized its use to administer death sentences. 271

The fact that a large majority of death penalty states do not permit the use of electrocution, 272 hanging, 273 lethal gas, 274 or firing squad 275 is a

268. Id. at 552–53 (”[T]hirty States prohibit the juvenile death penalty, comprising 12 that have rejected the death penalty altogether and 18 that maintain it but, by express provision or judicial interpretation, exclude juveniles from its reach.”).
269. Kennedy v. Louisiana, 554 U.S. 407, 426 (2008) (“Only six of those jurisdictions authorize the death penalty for rape of a child. Though our review of national consensus is not confined to tallying the number of States with applicable death penalty legislation, it is of significance that, in 45 jurisdictions, petitioner could not be executed for child rape of any kind.”).
271. Baze v. Rees, 553 U.S. 35, 53 (2008) (“W[e] note at the outset that it is difficult to regard a practice [lethal injection] as ‘objectively intolerable’ when it is in fact widely tolerated. Thirty-six States that sanction capital punishment have adopted lethal injection as the preferred method of execution.”).
strong indicator that the traditional methods of capital punishment may not meet the Eighth Amendment’s evolving standards of decency. The percentages are even lower when the nineteen states that do not permit the death penalty at all are factored in. The percentage of states authorizing traditional methods of capital punishment ranges from a low of four percent for hanging, to a high of sixteen percent for electrocution. These percentages are well within the range that the Court has previously cited to find evidence of a national consensus against a particular capital punishment practice.

The Court has not limited its inquiry into objective indicia of national consensus to the mere number of states permitting a form of capital punishment. In Atkins, Justice Kennedy writing for the majority noted, “[i]t is not so much the number of these States that is significant, but the consistency of the direction of change.” Looking to the direction of change, the last thirty years reflect a noticeable trend of states consistently moving away from methods of execution that they consider less humane than lethal injection. Of the thirty-one states with the death penalty, only Washington State authorizes a traditional method of execution (hanging) as a primary form of capital punishment along with lethal injection. As of this writing, only three states (Oklahoma, Tennessee, and Utah) have actually adopted laws to reinstitute a traditional method of capital punishment. Despite the recent efforts of some states to reinstitute traditional methods of capital punishment, the overall trend over the last three decades has been overwhelmingly away from such methods.

Advocates of capital punishment may counter-argue that the trend

away from traditional methods of execution and towards lethal injection is part of an effort to find a more humane way of executing inmates, which does not necessarily mean the traditional methods of execution are so inhumane that they violate the Eighth Amendment. Yet, numerous examples of extreme pain and suffering as a result of botched electrocutions, hangings, gassings and even firing squads raise legitimate questions about the humanity of such methods. Following the example set by Nebraska’s high court, Americans should engage in an honest discussion of whether the traditional methods of execution can withstand the Eighth Amendment’s prohibition on cruel and unusual punishments. As Judge Kozinski so graphically stated in Wood, “[i]f we, as a society, cannot stomach the splatter from an execution carried out by firing squad,” perhaps it will advance the discussion of whether we should “be carrying out executions at all.”

CONCLUSION

For thirty years, lethal injection has been the predominant method used to administer death sentences in America. Opposition to the death penalty has impeded the ability of states to obtain the drugs used for lethal injections. Faced with challenges obtaining drugs necessary for lethal injections, some states have considered legislative proposals to reinstate the electric chair, firing squad, and gas chamber.

The Supreme Court has repeatedly asserted that the Eighth Amendment is not static, but rather “draw[s] its meaning from the evolving standards of decency that mark the progress of a maturing society.” In an effort to determine the evolving standards of decency with respect to capital punishment, the Court has looked to the laws of

the states as objective indicia of national consensus. Of the thirty-one states that currently authorize the death penalty, only a handful of states still allow for traditional methods of capital punishment. The national trend of the states away from the traditional methods of capital punishment indicates that these methods have fallen out of favor, suggesting that these methods can no longer withstand Eighth Amendment scrutiny.
